

## RECOMMENDED STORAGE

Any wraps or covers shall be removed from doors and frames upon receipt at the jobsite or storage facility. Any scratches or abrasions received during shipping and handling are to be promptly cleaned and repainted with a rust inhibitive primer.

All material must be stored on planks or dunnage in a dry location. Doors and frames shall be stored in a vertical position and spaced by blocking as shown in diagrams.

If material is covered during storage ample air circulation must be provided between units.

Failure to follow these instructions may result in deterioration of the shop primer, resulting in corrosion of the steel.
