

PRODUCT BULLETIN

September 15, 2008

**SUBJECT: EXPANDED LABELING CAPABILITIES FOR GLAZED FRAMES
AND GLAZED HOLLOW METAL DOORS**

In our continuing effort to improve and enhance labeling of fire-rated products, MPI is announcing additions to products receiving clear ceramic glazing. We have recently been approved for labeling frames with any UL listed ceramic glazing material- regardless of the thickness. As long as the glazing material is a listed UL component we can provide frames to accommodate the glazing. All glazed opening size restrictions are based on the sizes tested by the individual glazing material manufacturer and/or those described in the UL Follow-Up Service procedure for MPI. Hourly ratings and hose stream results are limited to those tested by the manufacturer.

Similar improvements are also applicable to fire-rated doors. Glazed openings in doors are now limited to the sizes and ratings tested by the individual glazing manufacturer.

When placing an order please remember to provide the glazing manufacturer's name and the product identification information for the glazing material that is to be installed in the door and/or frame. Please contact our Engineering Department if you require further assistance or need additional information.
